

ONLINE WEBINAR

Link will be sent after
registration

The Slovak-Austrian Chamber of Commerce in cooperation with the British Chamber of Commerce in Slovakia and KPMG would like to cordially invite you to

The Power of Microsoft Power Platform

The MS Power Platform has been evolving rapidly recently. Let's talk more about the platform itself and its components that are currently available.

We would like to demonstrate how this toolbox can help you and show this on real business implementations.

- **Power Automate** is a workflow engine which can quickly automate any process or task in your organizations. Let's showcase how you can use it on a practical example and explain its capabilities related to RPA (robotic process automation).
- **Power Apps** is a suite of apps, services, connectors and data sources that provides a rapid application development environment to build custom apps for your business needs. We will show you applications that helped us deliver value to our customers without a need to build the application from scratch
- **Power BI** is a well-known suite of business analytics tools to analyze and visualize data. We will demonstrate various usecases of Power BI / Power Query, such as data mining techniques, financial and sectorial analysis, automated cash flow reporting or online controlling. We will also easily cover the introduction of DAX (Data Analysis eXpressions) and data modeling.
